APPLICATION PERMISSIONS

PERMISSION	STATUS	INFO	DESCRIPTION
android.permission.VIBRATE	normal	control vibrator	Allows the application to control the vibrator.
android.permission.ACCESS_COARSE_LOCATION	dangerous	coarse (network-based) location	Access coarse location sources, such as the mobile network database, to determine an approximate phone location, where available. Malicious applications can use this to determine approximately where you are.
android.permission.ACCESS_BACKGROUND_LOCATION	dangerous	access location in background	Allows an app to access location in the background.

android.permission.ACCESS_FINE_LOCATION	dangerous	fine (GPS) location	Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power.
android.permission.ACCESS_NETWORK_STATE	normal	view network status	Allows an application to view the status of all networks.
android.permission.ACCESS_WIFI_STATE	normal	view Wi-Fi status	Allows an application to view the information about the status of Wi-Fi.
android.permission.INTERNET	normal	full Internet access	Allows an application to create network sockets.
android.permission.POST_NOTIFICATIONS	dangerous	allows an app to post notifications.	Allows an app to post notifications
com.samsung.android.providers.context.permission.WRITE_USE_APP_FEATURE_SURVEY	unknown	Unknown permission	Unknown permission from android reference
com.google.android.gms.permission.ACTIVITY_RECOGNITION	dangerous	allow application to recognize physical activity	Allows an application to recognize physical activity.
android.permission.WAKE_LOCK	normal	prevent phone from sleeping	Allows an application to prevent the phone from going to sleep.
com.android.alarm.permission.SET_ALARM	unknown	Unknown permission	Unknown permission from android reference
android.permission.READ_CALENDAR	dangerous	read calendar events	Allows an application to read all of the calendar events stored on your phone. Malicious applications can use this to send your calendar events to other people.

android.permission.WRITE_CALENDAR	dangerous	add or modify calendar events and send emails to guests	Allows an application to add or change the events on your calendar, which may send emails to guests. Malicious applications can use this to erase or modify your calendar events or to send emails to guests.
android.permission.BLUETOOTH	normal	create Bluetooth connections	Allows applications to connect to paired bluetooth devices.
android.permission.CAMERA	dangerous	take pictures and videos	Allows application to take pictures and videos with the camera. This allows the application to collect images that the camera is seeing at any time.
android.permission.FLASHLIGHT	normal	control flashlight	Allows the application to control the flashlight.
android.permission.WRITE_EXTERNAL_STORAGE	dangerous	read/modify/delete external storage contents	Allows an application to write to external storage.
android.permission.READ_EXTERNAL_STORAGE	dangerous	read external storage contents	Allows an application to read from external storage.
android.permission.USE_BIOMETRIC	normal	allows use of device-supported biometric modalities.	Allows an app to use device supported biometric modalities.
android.permission.USE_FINGERPRINT	normal	allow use of fingerprint	This constant was deprecated in API level 28. Applications should request USE_BIOMETRIC instead.
com.google.android.c2dm.permission.RECEIVE	normal	recieve push notifications	Allows an application to receive push notifications from cloud.

com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE	normal	permission defined by google	A custom permission defined by Google.
com.google.android.gms.permission.AD_ID	normal	application shows advertisements	This app uses a Google advertising ID and can possibly serve advertisements.
android.permission.RECEIVE_BOOT_COMPLETED	normal	automatically start at boot	Allows an application to start itself as soon as the system has finished booting. This can make it take longer to start the phone and allow the application to slow down the overall phone by always running.
android.permission.SCHEDULE_EXACT_ALARM	normal	permits exact alarm scheduling for background work.	Allows an app to use exact alarm scheduling APIs to perform timing sensitive background work.
com.wondershare.famisafe.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION	unknown	Unknown permission	Unknown permission from android reference
com.android.vending.BILLING	normal	application has in-app purchases	Allows an application to make in-app purchases from Google Play.
android.permission.CHANGE_WIFI_STATE	normal	change Wi-Fi status	Allows an application to connect to and disconnect from Wi-Fi access points and to make changes to configured Wi-Fi networks.

CERTIFICATE ANALYSIS

HIGH: 0 | WARNING: 1 | INFO: 1

TITLE	SEVERITY	DESCRIPTION
Signed Application	info	Application is signed with a code signing certificate
Application vulnerable to Janus Vulnerability	warning	Application is signed with v1 signature scheme, making it vulnerable to Janus vulnerability on Android 5.0-8.0, if signed only with v1 signature scheme. Applications running on Android 5.0-7.0 signed with v1, and v2/v3 scheme is also vulnerable.

MANIFEST ANALYSIS

HIGH: 3 | WARNING: 19 | INFO: 0 | SUPPRESSED: 0

NO	ISSUE	SEVERITY	DESCRIPTION
1	App can be installed on a vulnerable upatched Android version Android 4.4-4.4.4, [minSdk=19]	high	This application can be installed on an older version of android that has multiple unfixed vulnerabilities. These devices won't receive reasonable security updates from Google. Support an Android version => 10, API 29 to receive reasonable security updates.
2	Clear text traffic is Enabled For App [android:usesCleartextTraffic=true]	high	The app intends to use cleartext network traffic, such as cleartext HTTP, FTP stacks, DownloadManager, and MediaPlayer. The default value for apps that target API level 27 or lower is "true". Apps that target API level 28 or higher default to "false". The key reason for avoiding cleartext traffic is the lack of confidentiality, authenticity, and protections against tampering; a network attacker can eavesdrop on transmitted data and also modify it without being detected.
			An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity

3	Launch Mode of activity (com.wondershare.famisafe.share.account.RegisterAct) is not standard.	warning	and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
4	App Link assetlinks.json file not found [android:name=com.wondershare.famisafe.CheckRoleSplashActivity] [android:host=http://famisafe.page.link]	high	App Link asset verification URL (http://famisafe.page.link/.well-known/assetlinks.json) not found or configured incorrectly. (Status Code: 301). App Links allow users to redirect from a web URL/email to the mobile app. If this file is missing or incorrectly configured for the App Link host/domain, a malicious app can hijack such URLs. This may lead to phishing attacks, leak sensitive data in the URI, such as PII, OAuth tokens, magic link/password reset tokens and more. You must verify the App Link domain by hosting the assetlinks.json file and enabling verification via [android:autoVerify="true"] in the Activity intent-filter.
5	Launch Mode of activity (com.sensorsdata.analytics.android.sdk.dialog.SchemeActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
6	Activity (com.sensorsdata.analytics.android.sdk.dialog.SchemeActivity) is not Protected. [android:exported=true]	warning	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
7	Service (com.wondershare.famisafe.parent.ParentNotifyService) is not Protected. [android:exported=true]	warning	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
8	Launch Mode of activity (com.wondershare.famisafe.parent.guide.AuthorizeWaitActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
			An Activity should not be having the launch mode attribute

9	Launch Mode of activity (com.wondershare.famisafe.parent.reconnect.ReconnectActivity) is not standard.	warning	set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
10	Launch Mode of activity (com.wondershare.famisafe.parent.home.MainParentActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
11	Launch Mode of activity (com.wondershare.famisafe.parent.feature.AllFeatureActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
12	Broadcast Receiver (com.wondershare.famisafe.parent.reconnect.NetworkReconnectReceiver) is not Protected. [android:exported=true]	warning	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
13	Broadcast Receiver (com.appsflyer.SingleInstallBroadcastReceiver) is not Protected. [android:exported=true]	warning	A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
14	Activity (com.wondershare.famsiafe.billing.PayActivity) is not Protected. [android:exported=true]	warning	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
15	Launch Mode of activity (com.wondershare.famisafe.share.CommonWebActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.

16	Launch Mode of activity (com.wondershare.famisafe.share.account.LoginHomeActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
17	Launch Mode of activity (com.wondershare.famisafe.share.account.LoginAct) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
18	Launch Mode of activity (com.wondershare.famisafe.share.account.RoleActivity) is not standard.	warning	An Activity should not be having the launch mode attribute set to "singleTask/singleInstance" as it becomes root Activity and it is possible for other applications to read the contents of the calling Intent. So it is required to use the "standard" launch mode attribute when sensitive information is included in an Intent.
19	Activity (com.facebook.CustomTabActivity) is not Protected. [android:exported=true]	warning	An Activity is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device.
20	Service (com.google.android.gms.auth.api.signin.RevocationBoundService) is Protected by a permission, but the protection level of the permission should be checked. Permission: com.google.android.gms.auth.api.signin.permission.REVOCATION_NOTIFICATION [android:exported=true]	warning	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
	Broadcast Receiver (com.google.firebase.iid.FirebaseInstanceIdReceiver) is		A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result,

21	Protected by a permission, but the protection level of the permission should be checked. Permission: com.google.android.c2dm.permission.SEND [android:exported=true]	warning	the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.
22	Service (com.evernote.android.job.gcm.PlatformGcmService) is Protected by a permission, but the protection level of the permission should be checked. Permission: com.google.android.gms.permission.BIND_NETWORK_TASK_SERVICE [android:exported=true]	warning	A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission.

PLAYSTORE INFORMATION

Title: Parental Control App- FamiSafe

Score: 4.0740743 **Installs:** 5,000,000+ **Price:** 0 **Android Version Support:** **Category:** Parenting **Play Store URL:** com.wondershare.famisafe

Developer Details: Shenzhen Wondershare Software Co., Ltd., Shenzhen+Wondershare+Software+Co.,+Ltd., None, https://famisafe.wondershare.com/, famisafe@wondershare.com,

Release Date: Jul 13, 2018 **Privacy Policy:** Privacy link

Description:

FamiSafe – Parental Control App is designed for caring parents to control their children's screen time, track location, and monitor digital habits. This versatile app ensures your child’s safety with reliable tools to manage app usage, block inappropriate content, and monitor calls and messages. The latest version includes upgraded sensitive content monitoring. We support monitoring of sensitive emojis. emojis can convey as much meaning as words, and this feature ensures that your child’s online interactions are safe. How can FamiSafe – Parental Control App help protect your child? Monitor Online Activities – Want to know what your child does with their phone every day? Concerned they might visit dangerous content? FamiSafe can help you monitor their online activities, including how much time they spend on each app and which websites they visit, What videos do they watch on youtube and tiktok. Calls & Messages Monitoring - Stay informed by monitoring your child's calls and texts, with keyword detection to ensure their safety from potential dangers. Location Tracker – Worried when your child doesn’t respond, or when they're not by your side? FamiSafe's highly accurate GPS location tracker can help you know where they are and their historical whereabouts. Screen Time Control – Concerned about your child becoming addicted to mobile phones? FamiSafe’s screen time controller can help you customize screen time limits, such as less screen time on school days and more on weekends. Blocksite & App Blocker – FamiSafe – App Blocker helps guide your child to age-appropriate content by filtering inappropriate web pages and blocking adult apps, such as porn, dating apps, and certain gaming apps. Screen Viewer - Parents can remotely capture their children's screenshots to monitor and enforce appropriate phone usage. Remote screen capture is available for mobile devices, Windows and Mac. One-Way Audio – This newly released function allows you to listen to your child's surroundings, the location sound tracker feature now lets you know what’s happening around your kids to ensure they stay safe. This function empowers parents to stay connected and informed. Panic Button – If your child feels threatened when they are alone, they can use the SOS button on FamiSafe Kids. You will receive an SOS alert with their accurate location information, so you can help them right away. Sensitive words & sexual picture detection - with FamiSafe Parental Control App you can easily detect sensitive content on your child’s phone, including keywords & associated emojis (such as drugs, addiction, depression, suicide, etc.) and sensitive pictures across various platforms like WhatsApp, Facebook, Snapchat, Discord, YouTube, Instagram, Twitter, and other apps. Compared to a spy app, FamiSafe is more like a family link, allowing parents to understand their child better and help them develop good digital device usage habits. To start protecting your child 1.Download the Parental Control App – FamiSafe on your phone. 2.Download FamiSafe Kids on your child’s phone. 3.Pair the devices with the code to monitor your child remotely. A paid parent account can bind more than 5 children's devices at the same time, and parents can be added for co-parenting. FamiSafe does not contain any advertisement. Why should you choose FamiSafe- Parental Control App? Recognized and trusted by many organizations and associations * Best Products for

Elementary Kids 2024 * National Parenting Product Awards Winner 2024 * Best Middle & High School Products 2024 * Best Family Health & Safety Products 2024 ---POLICIES & TERMS OF USE--- Privacy Policy: https://www.wondershare.com/privacy.html Terms of Use: https://famisafe.wondershare.com/terms-of-use.html Website: https://famisafe.wondershare.com/ Contact US: customer_service@wondershare.com
